SECURE SOFTWARE DEVELOPMENT TRAINING

Security is very important for any project or application. In this course, we will explain how to create a secure application during all phases of the development cycle.

Overview

We provide training on securing your development process, where we make sure that your concept of security is comprehensible at the starting stage of application development. This training induces security to the application in application development, across all Software Development Life Cycle phases, by developing the fundamentals of secure software. This course will level up the software developers, software engineers, web application developers, DevOps, and other candidates who are interested in learning how to develop secure software. This course will ensure software developers develop and maintain the software which is very difficult to compromise. It even reduces the damage caused after an attack and directly mitigates any vulnerabilities.

Target Audience

• Beginners with web application
• Software Developers
• Software Engineers

Pre-Requisite

• Prior knowledge of basics of software development
• Prior knowledge of security

Why Infosec Train?

Certified & Experienced Instructor	**Flexible Schedule**	**Access to the recorded sessions**
Post Training Support	**Tailor Made Training**	**4 hrs/day in Weekend/ Weekday**

COURSE CONTENT

INFOSECTRAIN

- Introduction
- Basic of Security
- Secure Design Principles
- Secure Software Development Life Cycle
- Securing Requirement phase
- Securing Design and Planning
- Securing Code practice and Testing
- Database Security
- Threat modeling
- Cryptography
- Basic knowledge of OWASP
- Practice Project
